

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1-26. (canceled).

27. (currently amended) An information storage management system in a first administrative domain administered by a first organization, comprising:

a collection of stored objects;

an access control unit for determining if a requestor is authorized to access a protected object stored in the collection;

a resource manager connected to the access control unit and to a communications channel;

wherein the resource manager receives a user's request for access to the protected object, the request including a globally unique identifier for the user requesting the access, and in response to the user's request, the resource manager sends over the communications channel to an external storage management system in a second administrative domain administered by a second organization that is different from the first organization, a resource manager request for information about the user, the resource manager request including the globally unique identifier; and

wherein the resource manager upon receiving a response to the resource manager request  
~~including user information about the user~~ from the external storage management system passes  
the user information to the access control unit; and

wherein responsive to the ~~based on the~~ user information the access control unit  
determines whether to authorize the user for ~~grant the subject~~ access to the protected object.

28. (Original) The information storage management system of claim 27, wherein the  
globally unique identifier is a Universal Unique Identifier (UUID).

29. (Original) The information storage management system of claim 27, wherein the user  
information is organization information indicating whether the user is a member of an  
organization.

30. (currently amended) An information storage management system in a first  
administrative domain administered by a first organization, comprising:

a collection of stored objects;

an access control unit for determining if a requestor is authorized to access a protected  
object stored in the collection;

a resource manager connected to the access control unit and to a communications  
channel;

wherein the resource manager receives a user's request for access to the protected object, the request including a globally unique identifier for the user requesting the access, and in response to the user's request the resource manager resolves the globally unique identifier to a user identifier recognized by an external storage management system in a second administrative domain administered by a second organization that is different from the first organization; the resource manager sending to the external storage management system a resource manager request for information about the user, the resource manager request including the resolved user identifier; and

wherein the resource manager upon receiving a response to the resource manager request including user information about the user from the external storage management system passes the user information to the access control unit; and

wherein responsive to based on the user information the access control unit determines whether to ~~grant the subject~~ authorize the user for access to the protected object.

31. (Original) The information storage management system of claim 30, wherein the globally unique identifier is a Universal Unique Identifier (UUID).

32. (Original) The information storage management system of claim 30, wherein the user information is organization information indicating whether the user is a member of an organization.

33. (Original) The information storage management system of claim 30, wherein the resource manager resolves the globally unique identifier by using a name server.

34-46. (canceled).
